Installation de Wazuh sur Ubuntu

Avant tout, il faut minimum une machine de 50 Go voir 60 Go.

Mis à jour des paquets et installation des paquets nécessaire

- *Sudo apt update*
- *sudo apt install curl apt-transport-https unzip wget libcap2-bin software-properties-common lsb-release gnupg2 -y*

```
root@user:~# apt install curl apt-transport-https unzip wget libcap2-bin software-properties-common lsb-release gnup
g2
```

Téléchargement et exécution du script d'installation

- *curl -sO https://packages.wazuh.com/4.14/wazuh-install.sh*

```
root@user:~# curl -sO https://packages.wazuh.com/4.14/wazuh-install.sh
root@user:~# ls
wazuh-install.sh
```

- *Chmod +x wazuh-install.sh*
- *sudo bash ./wazuh-install.sh -a*

```
root@user:~# chmod +x wazuh-install.sh
root@user:~# ls
wazuh-install.sh
root@user:~# sudo bash ./wazuh-install.sh -a
28/01/2026 07:31:36 INFO: Starting Wazuh installation assistant. Wazuh version: 4.14.2
28/01/2026 07:31:36 INFO: Verbose logging redirected to /var/log/wazuh-install.log
```

Cette commande installe automatiquement tous les composants de Wazuh 4.14.2:

- *Wazuh indexer (moteur de recherche)*
- *Wazuh manager (serveur central)*
- *Filebeat (collecteur de logs)*
- *Wazuh dashboard (interface web)*

```
root@user:~# sudo bash ./wazuh-install.sh -a

```

<u>Une fois l'installation terminé pour y accéder nous allons avoir besoin de modifier plusieurs fichiers, on doit aussi garder nos identifiants donnés à la fin de l'installation.</u>

<u>On modifie d'abord le wazuh-dashboard</u>

- *sudo nano /etc/wazuh-dashboard/opensearch_dashboards.yml*

```
server.host: 0.0.0.0
opensearch.hosts: https://127.0.0.1:9200
server.port: 443
opensearch.ssl.verificationMode: certificate
# opensearch.username: kibanaserver
# opensearch.password: kibanaserver
opensearch.requestHeadersAllowlist: ["securitytenant","Authorization"]
opensearch_security.multitenancy.enabled: false
opensearch_security.readonly_mode.roles: ["kibana_read_only"]
server.ssl.enabled: true
server.ssl.key: "/etc/wazuh-dashboard/certs/wazuh-dashboard-key.pem"
server.ssl.certificate: "/etc/wazuh-dashboard/certs/wazuh-dashboard.pem"
opensearch.ssl.certificateAuthorities: ["/etc/wazuh-dashboard/certs/root-ca.pem"]
uiSettings.overrides.defaultRoute: /app/wz-home
opensearch_security.cookie.secure: true
# Session expiration settings
opensearch_security.cookie.ttl: 900000
opensearch_security.session.ttl: 900000
opensearch_security.session.keepalive: true
```

<u>On modifie server.host et on met 0.0.0.0 si ce n’est pas déjà le cas.</u>

<u>On restart le service :</u>

- *sudo systemctl restart wazuh-dashboard*

```
root@user:~# systemctl status wazuh-dashboard.service
● wazuh-dashboard.service - wazuh-dashboard
     Loaded: loaded (/etc/systemd/system/wazuh-dashboard.service; enabled; preset: enabled)

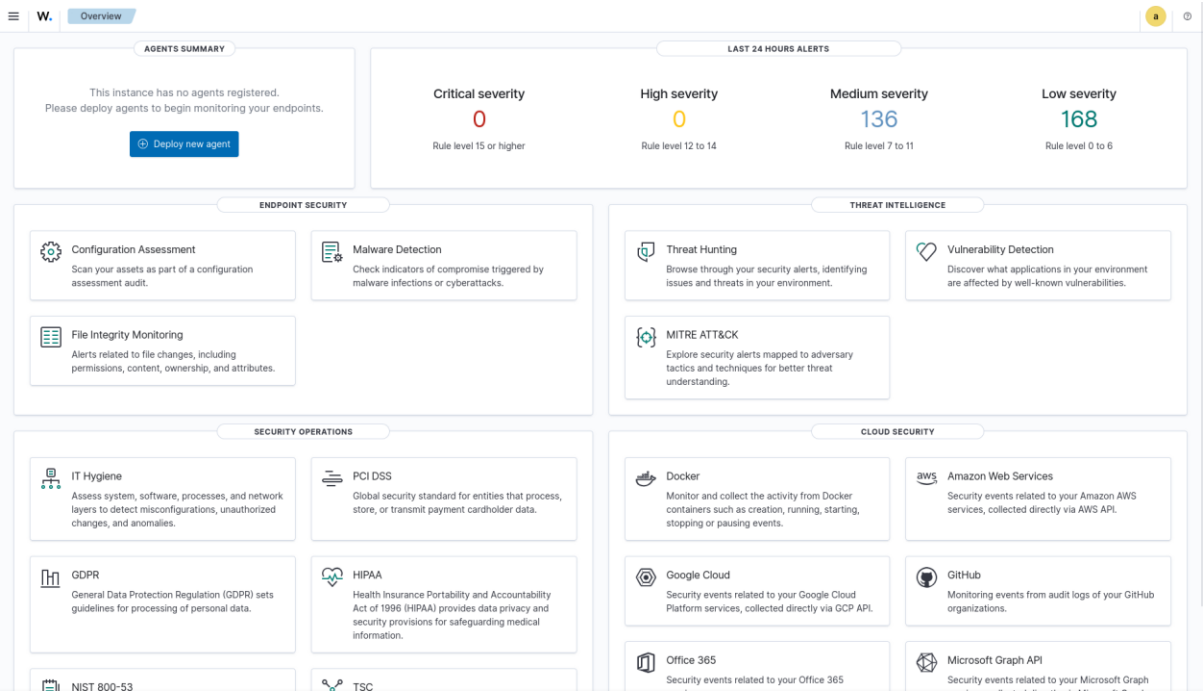
<u>Une fois qu’il est active on peut accéder à notre interface Wazuh.</u>

<u>Sur cette page nous allons utiliser les identifiants donnés à la fin du script d'installation</u>



Il ne manque plus qu'à déployer nos agents via GPO ou autre et nous aurons notre Wazuh fonctionnel

Au redémarrage le service Wazuh-dashboard peut prendre un peu de temps avant de réellement s'initialisé, le message ci-dessous est donc normal.

> Wazuh dashboard server is not ready yet

Sinon, nous devons vérifier les logs du service pour savoir d'où vient le problème, il peut être lié à des certificats !
